

# The facts about PR24

Manufactured in Italy by Beninca the PR24 is a harmonic style 24 volt swing gate electro mechanical operator suitable for gates to 3.5 metres wide.. It is a non reversible operator with manual override key and limit switches. One of the benefits of the 24 volt motor is the ability to use battery backup meaning you may never have to use the manual override. The use of tempered steel is prominent in this construction and the strong galvanised steel arms also add strength.

The PR24 is best married to the BENINCA control board commonly called "Brainy". Brainy has a full host of functions to give total control over performance and slow down functions. Available as the PR24 operator only for use with existing or other control systems the PR24 also comes as a kit with two operators, Brainy logic control and two remote controls.

160mm high x 332mm wide and 165mm deep the PR24 has an opening time of 9 seconds.
